Start Them Early

At what age should clients start to take care of their skin? A new treatment for babies suggests that **it's never too early to treat dry, irritated skin.**

One out of every four babies has skin that's easily irritated or extremely dry, and infantile eczema can appear anywhere on the body. **TTE Skincare** has developed a Natural Clay Facial

technique using a mixture of natural clay and water. The mixture is spread over the skin area to be treated using the fingertips with an extremely light touch. Dead skin cells are gently loosened without the use of machines, chemicals or peels. For more information call 916/988-4961 or visit

www.tigerseyeskinicare.com.
